

At the Miner's Den we....

learned how fossils form, saw rocks under a black light, learned what Michigan was like in the past, learned the reason scientists think dinosaurs died, saw a (dead) flying lizard, got pennies flattened, saw a tarantula, fossils, petrified wood, a petrified lizard, a giant Petoskey stone, heard cool stories, saw a woolly mammoth's femur, saw meteorites, bought rocks, saw a woolly mammoth's rib, learned about fluorescence, saw and felt a raptor's claw, and we bought items for our auction basket!
